

NICHOLAS BORRELLO

AI & Software Engineer — Agentic Systems & LLM Applications

Durham, NC • (508) 617-1586 • nvborrello@gmail.com • github.com/nickborrello • linkedin.com/in/nicholasborrello • nickborrello.github.io

SKILLS & CAPABILITIES

AI & AGENTS

LLM agents • Model Context Protocol (MCP) • Tool calling • Structured generation • Orchestration • Routing • RAG • AI eval • VLM/OCR

ML, NLP & LANGUAGES

TypeScript • Python • SQL • Java • PyTorch • CNNs • Transformers • spaCy • MediaPipe • Computer vision • Document intelligence

FULLSTACK & INFRA

React • Next.js • Node.js/Bun • PostgreSQL • SQLite • Supabase • Docker • Playwright • GitHub Actions • Azure DevOps

EXPERIENCE

Bay State Pet & Garden — AI & Software Engineer Taunton, MA | Jul 2024 – Present

- ◆ Develop a Product Intelligence system researching external product data, verifying variant identity, and producing evidence-backed catalog changes for human review.
- ◆ Engineer the agent execution layer behind the research workflow, giving models 25 bounded research tools while enforcing privacy, cost, deadline, and tool-use limits.
- ◆ Maintain the retail CMS carrying product data through onboarding, review, and publishing, evaluating new AI behavior against verified datasets before live workflows.

Allegro MicroSystems — Process Engineering Intern Manchester, NH | Jun 2023 – Aug 2023

- ◆ Built an Azure DevOps CI/CD pipeline that automated driver deployment to engineering testing equipment, replacing a manual deployment process.
- ◆ Developed the supporting deployment workflow used to deliver driver updates consistently to test systems and simplify repeated testing.

EDUCATION

Worcester Polytechnic Institute — M.S. Computer Science Worcester, MA | Aug 2025

Worcester Polytechnic Institute — B.S. Computer Science Worcester, MA | May 2024

SELECTED PROJECTS

Resumancer AI — Agentic Career Workspace Oct 2025 – Present | Next.js, TypeScript, Vercel AI SDK

- ◆ Built a career workspace comparing job requirements with a Master CV, proposing evidence-backed changes with reviewable diffs instead of unconstrained rewrites.
- ◆ Added ATS compatibility checks, model fallback, and PDF export so verified career data moves from job analysis to an application-ready resume.

ShopSite MCP Server Jan 2026 | TypeScript, Model Context Protocol, Zod

- ◆ Built an MCP server that lets AI agents retrieve orders, search products, and manage inventory in ShopSite without interacting directly with legacy APIs.
- ◆ Wrapped XML/CGI requests, HMAC-SHA1 authentication, and legacy response formats behind typed, validated tools designed for safe LLM use.

Medusa Storefront Agent — Commerce Operations Jul 2026 | TypeScript, Medusa.js, PostgreSQL, MCP

- ◆ Built an autonomous store operations agent on Medusa.js that monitors inventory levels, drafts automated reorders, and applies pricing rules via typed MCP tool calls.
- ◆ Implemented schema validation with Zod and PostgreSQL event listeners to ensure reliable multi-step agent actions without human intervention.

American Sign Language Gesture Recognition Jan 2025 – May 2025 | Python, PyTorch, ResNet34, MediaPipe

- ◆ Trained CNN/Transformer models to recognize 100+ ASL gestures using ResNet34 and MediaPipe-derived features, and parallelized preprocessing for faster experimentation.
- ◆ Engineered real-time landmark extraction and temporal sequence processing pipelines, achieving robust classification across varying angles and lighting.

NEVI Search Tool — WPI IQP / Atlas Public Policy Aug 2022 | Python, spaCy, PyMuPDF

- ◆ Built a document-search tool helping analysts find policy evidence in state EV infrastructure plans using keyword search, fuzzy matching, and NLP preprocessing.
- ◆ Extracted structured tabular data and funding metrics from multi-hundred-page policy PDFs with PyMuPDF, reducing manual analyst review time.
